Sequence 2, Application US/08460462
Patent No. 5670623
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Shpiegl, Itai
APPLICANT: Shpiegl, Itai
APPLICANT: Goldstein, Marc A.
APPLICANT: OF INVENTION: METHODS OF USE OF CELLULOSE BINDING DOMAIN PROTEINS
NUMBER OF SEQUENCES: 21
CORRESPONDENCE ADDRESS:
ADDRESSEE PENNIE & EDMONDS
STREET: 1155 Avenue of the Americas
CITY: New York
STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2 SGGVKVQYKNNDSAPGDNQIKPGLQLVNTGSSSVDLSTVTVRYWFTRDGGSSTLVYNCDW 61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tra
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            exc
A; Experimental source: strain IFO3034
C; Function:
A; Description: hydrolysis of 1,4-beta-D-glucosidic linkages in beta-D-glucans such as A; Pestivay: cellulose degradation
C; Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degradation
C; Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degradation
F; 1-36/Domain: signal sequence #status predicted <SIG>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Description: hydrolysis of 1,4-beta-D-glucosidic linkages in beta-D-glucans such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Accession: A43802
A; Status: preliminary; nucleic acid sequence not shown; not compared with conceptual
A; Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A;Title: Nucleotide sequence of a gene from Caldocellum saccharolyticum encoding for A;Reference number: S02711; MUID:89098398
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                N'Alternate names: endo-1.4-beta-glucanase
N'Contains: cellulase (EC 3.2.1.4); cellulose 1,4-beta-cellobiosidase (EC 3.2.1.91)
C;Species: Caldocellum saccharolyticum

Signature clostridium thermocellum
Ni Alternate names: probable cellulosome protein large chain SL
CipAcession: Signetistium thermocellum
C; Species: Clostridium thermocellum
C; Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change Ol-Dec-2000
C; Accession: Signetistium thermocellum
C; Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change Ol-Dec-2000
C; Accession: Signetistium thermocellum
C; Accession: Signetistium A.L.
Submitted to the EMBL Data Library, January 1993

Appl. Environ. Microbiol. 57:694-700(1991).
-!- FUNCTION: DEGRADATION OF HEMICELLIOSES, THE SECOND MOST ABUNDANT
POLYSACCHARIDES IN NATURE. CONTAINS TWO CATALYTIC DOMAINS WITH
MANNANASE AND ENDOGLUCANASE ACTIVITIES.
-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-beta-D-mannosidic
                                                                                                                                                                                                                                                                                                                                                           01-JUL-1993 (Rel. 26, Last sequence update)
16-CCT-2001 (Rel. 40, Last annotation update)
Beta-mannanase/endoglucanase A precursor [Includes: Mannan endo-1,4-beta-mannosidase A (EC 3.2.1.78) (Beta-mannase); Endo-1,4-beta-glucanase (EC 3.2.1.4) (Cellulase)].
                                                                                                                                                                                                                                                                                          Gaps

Cellulosomal scaffolding protein B (Cellulosomal glycoprotein S1/SL)
(Cellulose integrating protein B) (Fragment).
       J. Gen. MICROBIOL. 139:307-316(1993).

-1- FUNCTION: THIS BRIXYME CATALYZES THE ENDOHYDROLYSIS OF 1.4-BETA-GLUCOSIDIC LINKAGES IN CELLULOSE, LICHENIN AND CEREAL BETA-D-GLUCANS. PRINCIPALLY ACTIVE AGAINST BARLEY BETA-GLUCAN.

-1- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose.

-1- PATHWAY: CELLULOSE DEGRADATION.

-1- SIMILARITY: BELONGS TO CELLULASE FAMILY E (FAMILY 9 OF GLYCOSYL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Clostridium thermocellum.

gene (obtd. from Aeromonas) into pUC18. The protein has amol. wt. of 81.000 (SDS-PAGE) and an optimum pH near to 5 when carboxymethylcellulose is the substrate. The Yerminal sequence: GIHADT has been confirmed by Edman degradation. The gene can be used to produce recombinant enzyme which is used for the effective utilisation of biomass resources and the mfr. of pharmaceuticals and foodstuffs, and also for the detergent and deinking of waste paper.

ï
remove staining, backstaining or graying, for use on cellulosic materials including cotton-containing fabrics. They are especially useful for preventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using non-truncated cellulase compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4/5, Cel E1/2, Cel I1/2/3, Cel Col Gor Cel E3/B5, or a stability region from one of the defined fulllength sequences, or functional equivalents. Cel B5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid K635 to N1426 in the sequence shown in AAY13492; Cel E1 extends from amino acid Y39 to G812, Cel E1/2 extends from 39 to G635, Cel E1/2/3 extends from 139 to G812, Cel E6 extends from amino acid V1233 to K1751 and the stability region extends from amino acid W1233 to the sequence shown in AAY13493; Cel E3/B5 is shown in AAY13494. The new enzymes are useful in laundry detergent compositions to prevent or remove staining, backstaining or graying, for use on cellulosic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cellulase; proteinase; truncated; Cel B5; Cel B4/5; Cel E1; Cel E1/2; Cel 1/2/3; Cel 6; Cel E3/B5; laundry detergent; stain-removing; cotton-containing fabric; stonewashing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a recombinant cellulase active protein free of proteinases of native thermophilic and alkalinophilic origin, comprising the truncated sequences Cel B5, Cel B4/5, Cel B1/2, Cel 11/2/3, Cel 6 or Cel 13/85, or a stability region from one of the defined full-length sequences, or functional equivalents. Cel B5 extends from amino acid A1011 to P1424 or K1425 or N1426, and Cel B4/5 extends from amino acid K635 to N1426 in the sequence shown in AAY13422, Cel E1 extends from amino acid K139 to D481, Cel E6 extends from 39 to G635, Cel E1/2, axtends from 439 to G812, Cel E6 extends from amino acid W1233 to K1751 and the stability region extends from amino acid R482 to G635, in the sequence shown in AAY13493, Cel E6 extends from amino acid W1233 to K1751 and the stability region extends from amino acid E482 to G635, in the sequence shown in AAY13493, Cel E3/85 is shown in AAY13494. The new enzymes are useful in laundry detergent compositions to prevent or remove staining, backstaining or graying, for use on cellulosic materials including cotton-containing fabrics. They are especially useful
                                                                                                                                                                                                                                  1;
materials including cotton-containing fabrics. They are especially useful for preventing redeposition of colorant during stonewashing, and for processing of textiles where cellulose breakdown is required. The new truncated enzymes show reduced redeposition of dye compared to using non-truncated cellulase compositions.
                                                                                                                                                                                                                                                                                              Cel B4/5; Cel E1; Cel E1/2;

The new truncated enzymes show reduced redeposition of dye compared to using non-truncated cellulase compositions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used to induce a mutation within the cellulase NK-1 gene. The gene is shown in sequence (AAQ49820). The modified NK-1 gene shows a change in pH dependence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Changing the pH-dependence of cellulase enzymatic activity - by changing base sequence of cellulose-producing gene of Bacillus microbe to base sequence coding asparagine and serine residues at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the corrected version of the incorrect Bacillus lautus (NCIMB 40250) endoglucanase Endo 3A described in W09110732. Endo 3 can be used in novel method of forming localised colour density variation on the surface of a dyed cellulosic fabric. The method comprises agitating the fabric in an aqueous medium (PH 6.5 to 9.0) containing a family 5 cellulose, e.g. the present sequence, which can hydrolyse p-nitrophenyl-beta abrading apent or cellulose having abrading activity. Each process, is useful to provide a stone washed look to blue jeans
                                                                                                                                                                                                                                                                                    Endoglucanase; Endo 3A; formation; localised; variation; colour density; surface; dye; fabric; family 5; cellulose; hydrolysation; p-nitrophenyl-beta-1,4-cellobioside; stone wash; blue jeans; back staining.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Localised variation of colour density in the surface of a dyed cellulosic fabric - uses cellulase compsn. able to hydrolyse

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The enzyme is produced by a strain of Bacillus spp. NCIMB 40250 and exhibits an endoglucanase activity of at least 10 (pref. at least 25) carboxymethyl cellulose (CMC) endoase units per mg total protein under alkaline conditions. It is especially useful as a cellulolytic agent and has been found to be more stable during washing (60 mins. at 40 deg.) in the presence of conventional detergents than a commercial cellulase preparation. It may also show increased storage stability in liq. detergents contg. proteases. The sequence was deduced from the DNA (AAQ13001). See also AAR13228 and AAR13229.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Enzyme exhibiting cellulase activity from Bacillus sp. - is an endo-glucanase, esp. useful for harshness redn. of cotton-contg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4;

hydrolyses galactomannans. Specifically, mannanases hydrolyse
hydrolyses galactomannans. Specifically, mannanases hydrolyse
l,4-beta-D-mannosidic linkages in mannans, galactomannans, glucomannans,
and galactoglucomannans. The mannanase protein, or preparations
containing it, are used to improve properties of cellulosic or
synthetic fibres, yarn or (non)woven fabrics (removal of mannan-based
sizes or printing pastes). They are also used to degrade or modify
plant material containing guar or locust bean gums (thickeners), or to
reduce viscosity of mannan-containing foods or feeds). The mannanases
are also used to process coffee extracts (to inhibit gel formation);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in cleaning compositions (for machine washing of fabrics, as hard-surface cleaners, for hand or machine dishwashing, also in oral, dental, contact lens or body-care compositions) where they remove mannan-containing soils and prevent binding of some soils to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a mannanase-linker-cellulose binding domain fusion protein. Mannanase (also known as mannan

Bacillus subtilis was transformed with plasmid pMB914 for expression of the fusion protein. Pectate lyase can be used in detergent compositions, for cleaning hard surfaces, for machine treatment of fabrics, for improving the properties of cellulosis fibres, yarn, woven or non-woven fabric, for the degradation of plant material e.g. recycled waste paper, mechanical paper making pulps or fibres subjected to retting process, for preparing animal feed and for processing wine or juice.

The pectate lyase enzymes are obtained from Bacillus agaradhaerens (BA), Bacillus licheniformis (BL), Bacillus halodurans (BH) and other Bacillus species. The pectate lyase enzymes can be used for degrading pectin, pectate and polygalacturonides. They can be used in detergent compositions, for cleaning hard surfaces, for machine treatment of fabrics, for improving the properties of cellulosic fibres, yarm, woven or non-woven fabric, for the degradation of plant material (e.g. recycled waste paper, mechanical paper-making pulps or fibres subjected to a retting process, for
